EDUCATION

Cornell University, School of Engineering (*Majoring in Mechanical Engineering & Computer Science, 2027*)

Relevant Coursework: Discrete Math & Probability, Linear Algebra, Differential Equations, OOP & Data Structures (Java), Mechanics/Statics/Dynamics, System Dynamics, Mechanics of Materials, Electromagnetism, Fluid Dynamics, Thermodynamics

RELEVANT EXPERIENCE

Cornell Hyperloop - Braking Lead (*January 2025 - present, 10 Hrs/Week*)

- Leading the integration of pneumatic braking system pressurized to 125 psi with 150 kg pod and chassis, designing interface details and assembly instructions.
- Currently working on a system redesign to improve braking efficiency by 50% and reduce weight by 20%; preparing assembly and test plans for prototype evaluation.
- Coordinate parts procurement, fabrication, and subsystem testing with teammates.

Cornell Laboratory of Solid State and Atomic Physics - Ralph Lab Research Assistant (*August 2024 - present, 10 Hrs/Week*)

- Fabricate 10-20 semiconductor test structures per week using photolithography, thin-film deposition, and exfoliation in Cornell's Nanoscale Facility (CNF).
- Run basic electrical and optical measurements, keep detailed lab notes, and help analyze device behavior with the research team.
- Work on projects under SRC sponsorship and support day-to-day lab operations.

JP Morgan - Summer CIB Intern (*June 2025 - August 2025, 40 Hrs/Week*)

- Supported 3 deal teams with 10 different financial modeling, industry research, and client material portfolios.
- Prepared 5 presentations used in internal diligence and client meetings.
- Built small Python-based program to automate repetitive data pulls and speed up prep work of my own accord.

NASA Ames - Student Intern (*January 2022 - May 2025, 20 Hrs/Week fall/spring, 40 Hrs/Week summer*)

- Built a data pipeline to digitize and analyze over 100,000 historical air-traffic records using ML techniques.
- Extracted language patterns and structured information from unstructured archives to support airspace analysis.
- Worked closely with domain experts to reduce latency in data retrieval by 40%.

DTEK.ai - AI Intern (*July 2024 - September 2024, 20 Hrs/Week*)

- In charge of building out new area of the business: LLM-based chatbot for develop supermarket product floorplans.
- Designed dialog flows, integrated model responses into a demo interface, and tested the system on 5 real store scenarios.
- Focused on making the tool easy to use and improving response quality.

o9 Solutions - R&D Intern (*June 2024 - August 2024, 40 Hrs/Week*)

- Wrote C# utilities and SQL Server routines to improve sensitive client data handling for over 30 specific cases.
- Collaborated with engineers on code reviews and delivered tested, production-ready modules.
- Helped make data processing more reliable and maintainable.

Rocketship.vc - Independent Project with Managing Partner (*June 2024 - July 2024, 10 Hrs/Week*)

- Wrote a Python prototype that used over 20 years of USPTO data to score startups on IP strength and investment potential.
- Performed feature engineering and presented findings to the managing partner to inform screening decisions.

SKILLS

- | | |
|---|--|
| • Python, Java, C#, SQL, Git, Linux, Excel/VBA, pandas | • Probability, Linear Algebra, Differential Equations, Discrete Math & Data Structures |
| • Machine learning & LLM work, data pipelines, backtesting basics | • Embedded prototyping: Arduino (sensor interfacing & data logging), basic PCB prototyping |
| • CAD (OnShape, SolidWorks), prototype design & testing, photolithography & thin-film processes | • Languages: Spanish, Tamil, Russian, Korean |

HOBBIES

- Carnatic singer (15 years), Veena, Podcaster, Skiing
